PROFESSIONAL SUMMARY

Full-Stack Engineer with 6+ years of experience building and shipping production software across React and Next.js on the frontend and Django with PostgreSQL on the backend. I take features from first idea to live deployment, and I care about the parts users never see: fast queries, clean APIs, and pipelines that hold up under real load. Over the past few years I have cut API response times by 30 to 70 percent through query tuning and indexing, built asynchronous Celery pipelines that process heavy background workloads, lifted automated test coverage from roughly 10 percent to over 60 percent, and trimmed deployment time by 40 percent by reworking CI/CD pipelines. I am comfortable owning UI architecture, REST API design, database performance, and payment and real-time integrations, and I enjoy mentoring teammates and keeping delivery steady inside Agile teams. I am looking for senior full-stack roles, including remote positions with international teams, where I can own meaningful problems end to end.

TECHNICAL SKILLS

Languages JavaScript (ES6+), TypeScript, Python, SQL, HTML5, CSS3/SCSS

Frontend React.js, Next.js, Redux Toolkit, React Query, React Hook Form, Tailwind CSS, Material UI, SCSS

Backend Django, Django REST Framework, REST API design, Celery (async/task queues), Django Channels

Databases PostgreSQL, SQL (query optimization, indexing, N+1 elimination), Redis

Integrations Stripe (payments), SendGrid (email), WebSockets, JWT auth, Google Looker (BI), Google Analytics, Scrapy

Testing Jest, Cypress, Vitest, Storybook

DevOps GitLab CI/CD, GitHub Actions, Docker, Git, ESLint, Prettier, Husky

Cloud AWS, Microsoft Azure, Google Cloud Platform (GCP)

Foundations Data Structures & Algorithms, System Design, Performance Optimization, Agile/Scrum, Code Review, Mentoring

PROFESSIONAL EXPERIENCE

Senior Full-Stack Engineer | Arbisoft

2020 to Present

Full-stack delivery across multiple production products

- Cut API response times by 30 to 70 percent across core endpoints by removing N+1 queries, reworking ORM access patterns, and adding the right database indexes on high-traffic paths.
- Built and scaled asynchronous job processing with Celery to handle heavy background workloads, including bulk PDF generation and scheduled reporting jobs.
- Built reporting and analytics systems that manage over 1000 assets, putting clear operational metrics in front of both internal teams and customers.
- Brought deployment time down by 40 percent by reworking GitLab CI/CD pipelines with parallel jobs, layer caching, and end-to-end build automation.
- Grew automated test coverage from around 10 percent to over 60 percent with Jest, Cypress, and Vitest, and set up quality gates with ESLint, Prettier, and Husky that cut production bugs by more than 25 percent.
- Reworked frontend architecture to cut unnecessary re-renders by about 30 percent and improve page load times by 20 to 30 percent through memoization, code-splitting, and cleaner state management.
- Designed and maintained REST APIs in Django REST Framework with sensible serialization, pagination, and permission layers used by several frontend clients.
- Owned integrations end to end, including Stripe payments, SendGrid email, Google Analytics, and Looker BI dashboards across multiple products.
- Added role-based access control and tightened authentication to protect sensitive endpoints and customer data.
- Mentored two engineers, getting one comfortable with Git workflows and the other up to speed on Django, through regular code reviews and pair-programming sessions.

- Worked closely with product and design in Agile ceremonies to scope features, estimate effort, and ship reliable releases on a predictable cadence.
- Delivered features from architecture through implementation, testing, and deployment, staying responsible for quality from the first commit to production.

Stack: *React.js, Next.js, Redux Toolkit, Django, Django REST Framework, PostgreSQL, Celery, Redis, GitLab CI/CD, Jest, Cypress, Vitest*

SELECTED PROJECTS

FixAlert, Maintenance-Management Platform

Full-Stack (React + Django) · Team of 10

- Sped up core APIs by removing N+1 queries and cutting redundant database lookups, so the app stayed responsive under heavy load.
- Smoothed out asynchronous workflows with Celery and email notifications, and added bulk PDF generation for high-volume document output.
- Built reporting metrics, wired up Stripe payments, and reworked the UI in an Agile environment to make the tool easier to use.

Stack: *React.js, Django, Material UI, Celery, Stripe, React Query, Redux Toolkit, PostgreSQL*

Rumi, Full-Stack Application

React + Django · Team of 7

- Led frontend architectural refactoring and state optimization to reduce re-renders and improve perceived performance.
- Authored Vitest test suites and enforced ESLint/Prettier pre-commit quality standards across the codebase.
- Contributed to the GitLab CI pipeline, automating build, test, and deployment stages.

Stack: *React.js, SCSS, Vite, Vitest, Redux Toolkit, Django*

Convo, Real-Time Chat Platform

Full-Stack · Personal Project

- Developed an end-to-end real-time chat platform with a React + Vite SPA frontend and Django REST Framework backend.
- Implemented live messaging over WebSockets using Django Channels with Redis for publish/subscribe management.
- Designed JWT authentication, user profiles, and avatar uploads, and configured a complete automated CI/CD pipeline.

Stack: *React.js, Vite, TypeScript, Tailwind CSS, Django REST Framework, Django Channels, Redis, WebSockets*

AskImam, Full-Stack Application

React + Django · Team of 4

- Built features across the React frontend and Django backend, and enhanced the admin dashboard for content management.
- Integrated Google Analytics and hardened authentication security against common vulnerabilities.
- Led the Django 2.x to 5.1 migration, which noticeably improved stability and runtime performance.

Stack: *React.js, Django, Material UI, SQL, Redux, Vite*

Landit, Career-Pathing Platform

Frontend (React + Next.js) · Team of 17

- Built responsive UIs in a large Agile/Scrum cross-functional team, managing Storybook components and frontend testing.
- Led library migrations (Material UI v4 to v5, React Router v4 to v5) with no regression downtime.
- Built Looker BI visualizations and designed SendGrid email templates used across the product.

Stack: *React.js, Next.js, Material UI, Redux, Jest, Cypress, Storybook, Looker, SendGrid*

Taiga, Open-Source Project-Management Fork

Full-Stack (AngularJS + Django) · Solo

- Built the Requestor and Feedback modules end-to-end across both frontend and backend.
- Added new Django models and REST API endpoints with permission controls and role-based access.
- Implemented reusable directives and controllers within a modular, maintainable architecture.

Stack: *AngularJS, CoffeeScript, Jade, SCSS, Django*

WHAT I BRING

- A real focus on performance. I enjoy digging into slow queries and heavy frontends and making them noticeably faster, not just on paper but in how the product actually feels to use day to day.
- End-to-end ownership and clear communication. I take a feature from a rough idea through design, implementation, testing, and deployment, work well with product and design, and keep delivery predictable.

EDUCATION

B.S. Software Engineering

Punjab University College of Information & Technology (PUCIT) · GPA: 3.08
